## Theory of Operation

The Lightwild DMX Contact Closure module is used to select up to 8 shows on the Lightwild DMX Director using 3rd party momentary contacts. Contacts are connected to the screw terminals on the Contact Closure Module. Closure of the momentary contact starts the show of the corresponding number in the Lightwild DMX Director.

When shows are preprogrammed onto the Lightwild DMX director from the factory, SHOW (0) is always an OFF show, which turns all fixtures OFF.

## Features
