The Garmin Store

Chicago, Illinois

LightWild Products: LightWild Linears

The Garmin Store on Chicago's famed "Magnificent Mile" shopping district required glass merchandise cases illuminated with warm white lighting. Because the cases were long and narrow, slender fixtures with minimal cable connections were required. The fixtures also needed to leverage the low heat and low energy advantages of LEDs. LightWild responded by manufacturing several of its Project Linear fixtures with warm white LEDs at various lengths, including some up to 96 inches (2.4 meters) long. The low profile fixtures fit perfectly in the narrow cases while also meeting the designer's warm lighting goals with minimal heat output.
